

Execute SQL Script

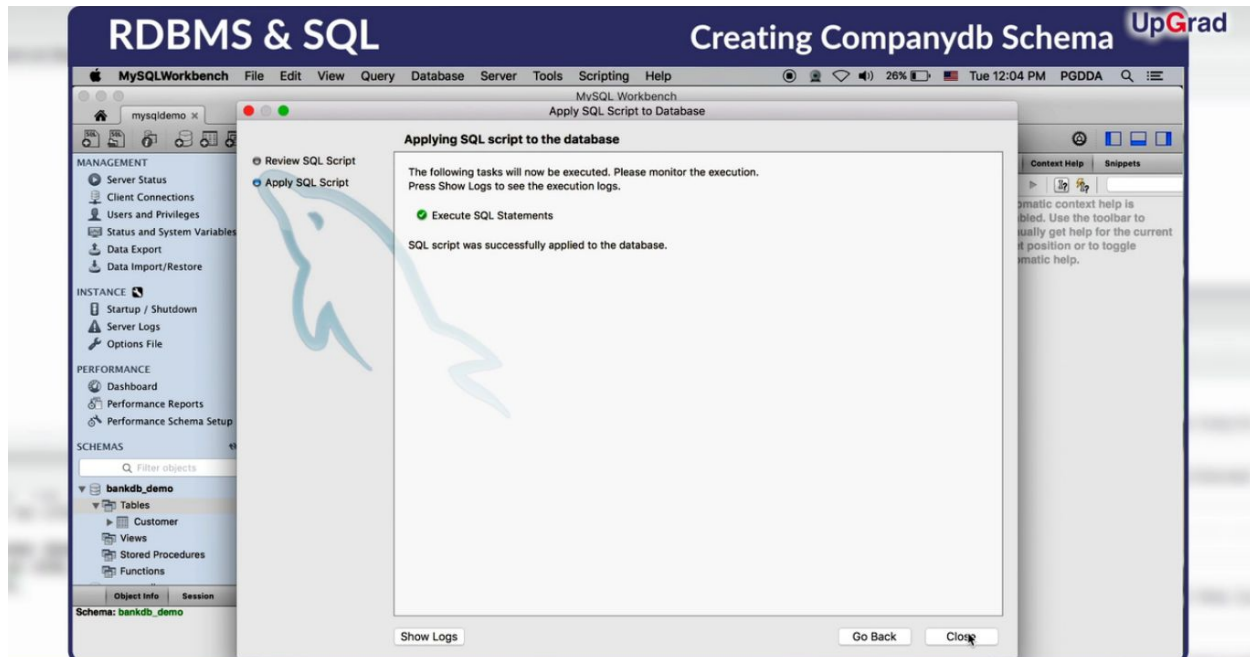

- Create a new schema with the details as shown in the image below.

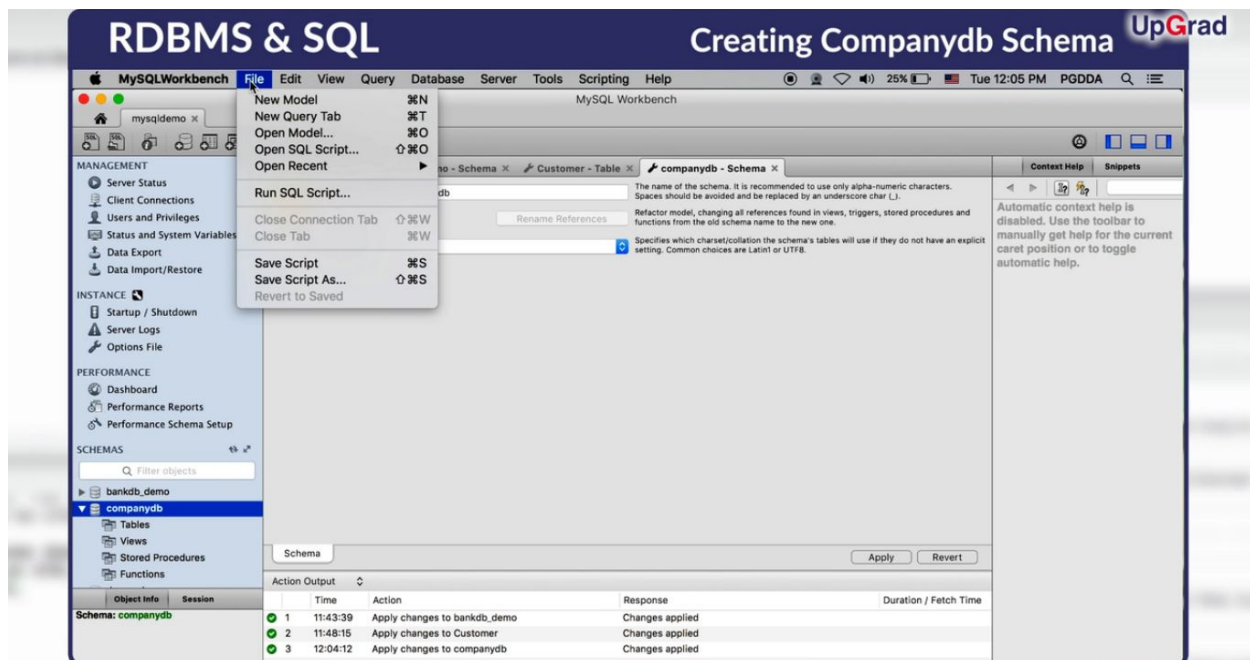

- Click on the **Apply** button.

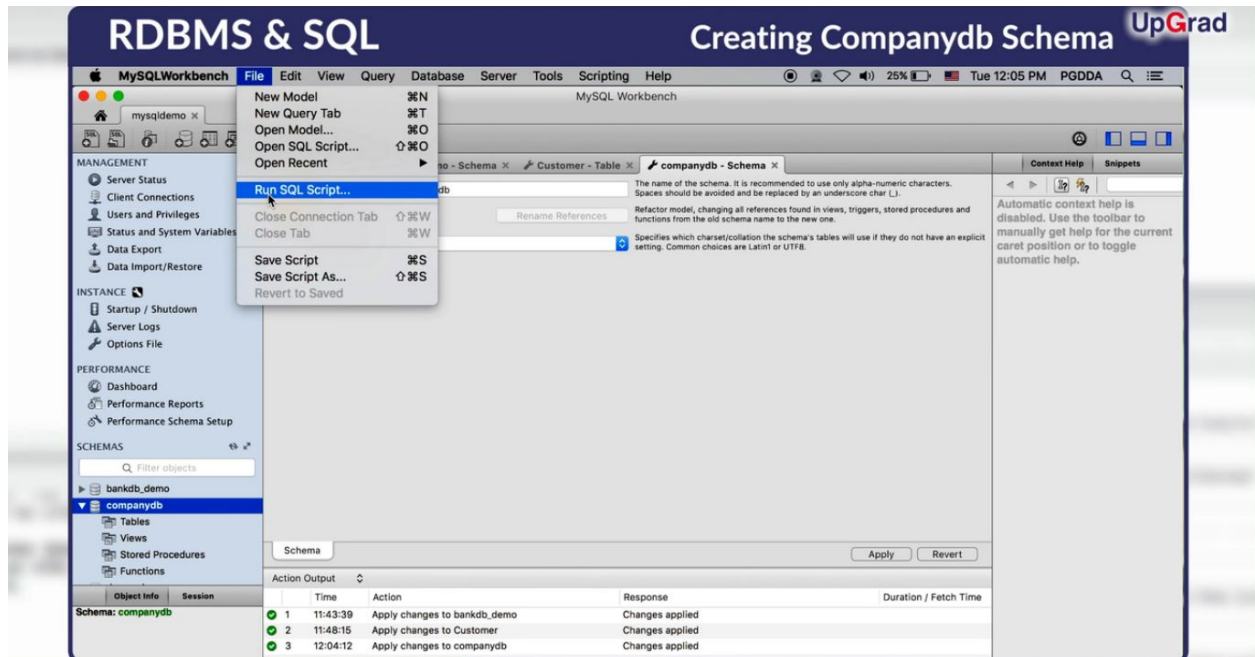

- Click on the **Close** button.

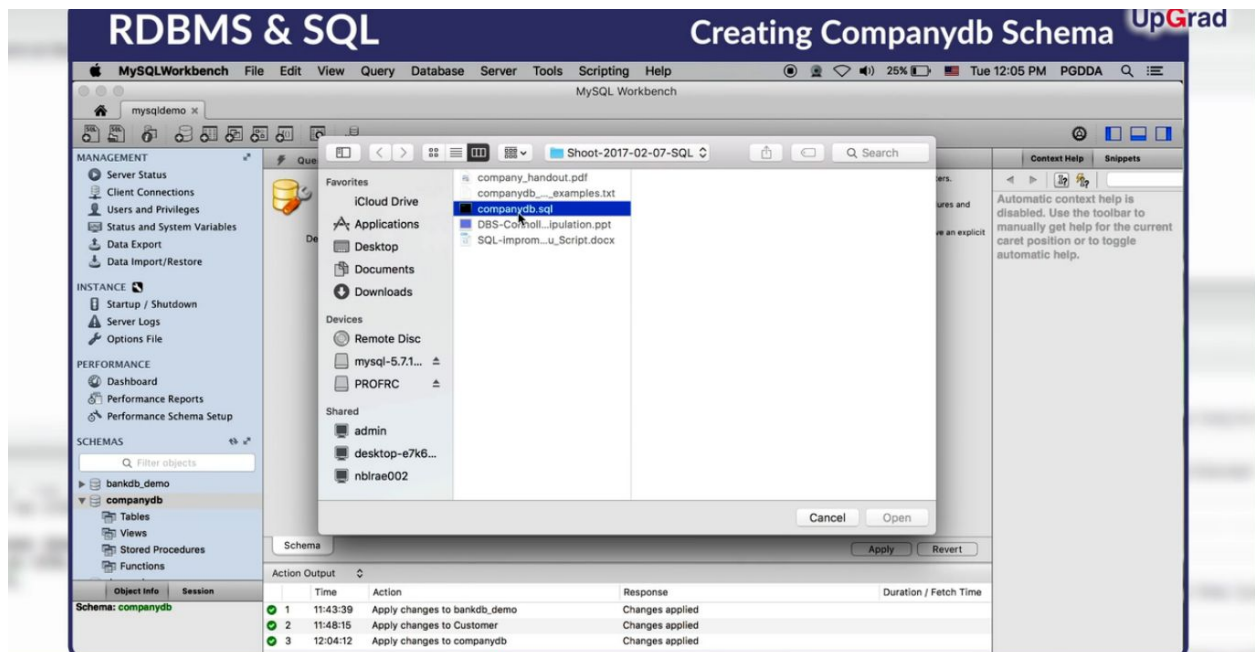

- Click on the **File** menu.

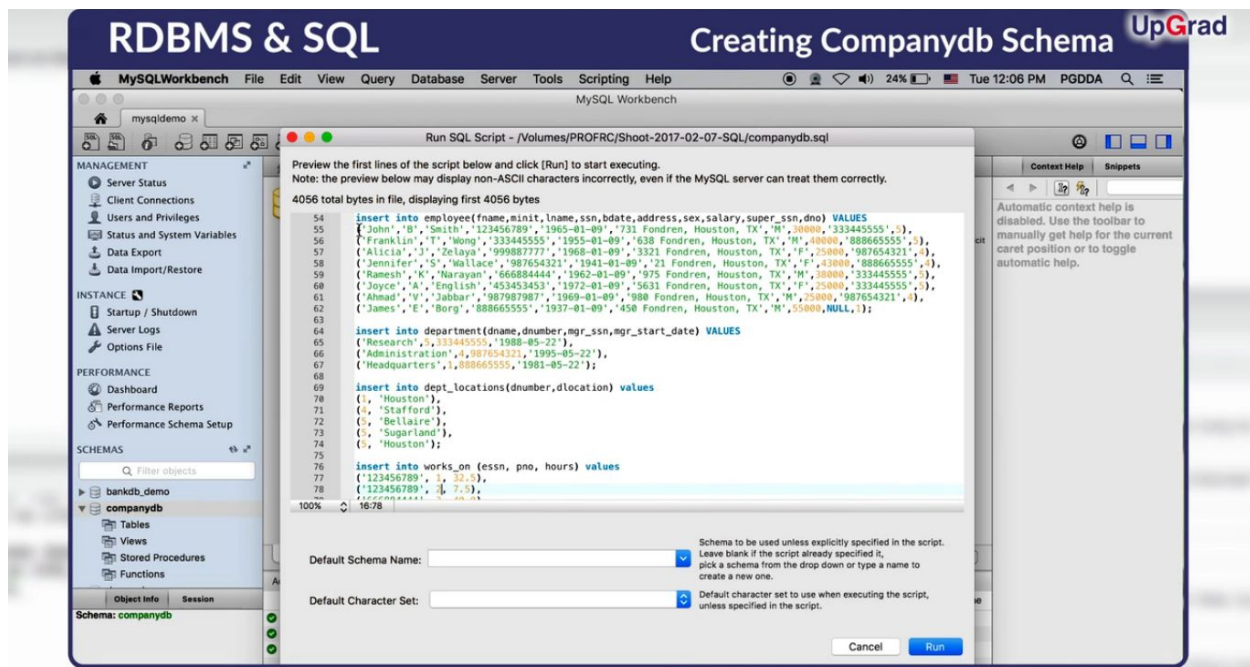

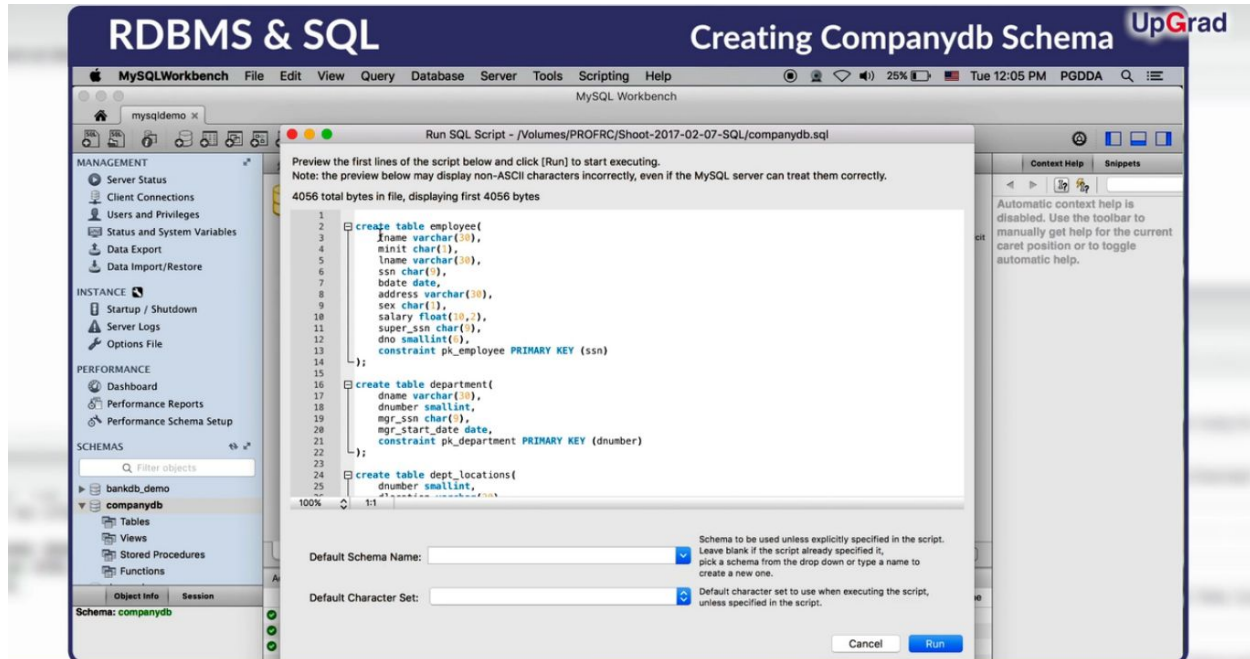

- Select the **Run SQL Script** option.

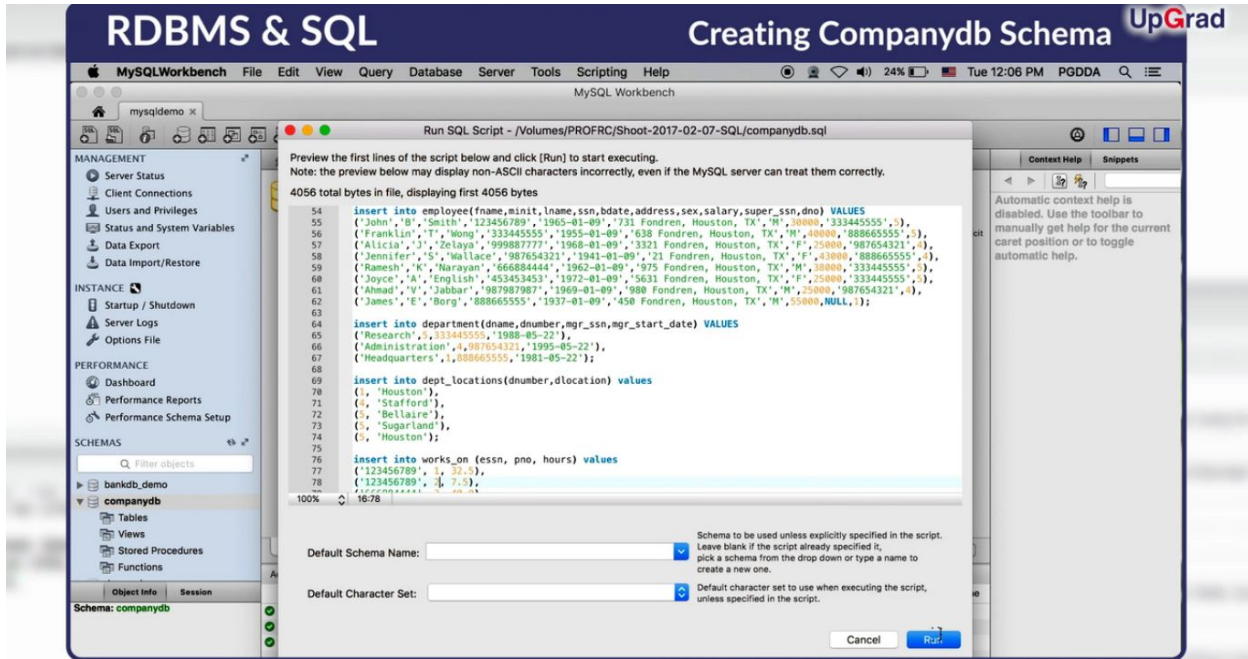

- Find the **companydb.sql** file in your local machine.

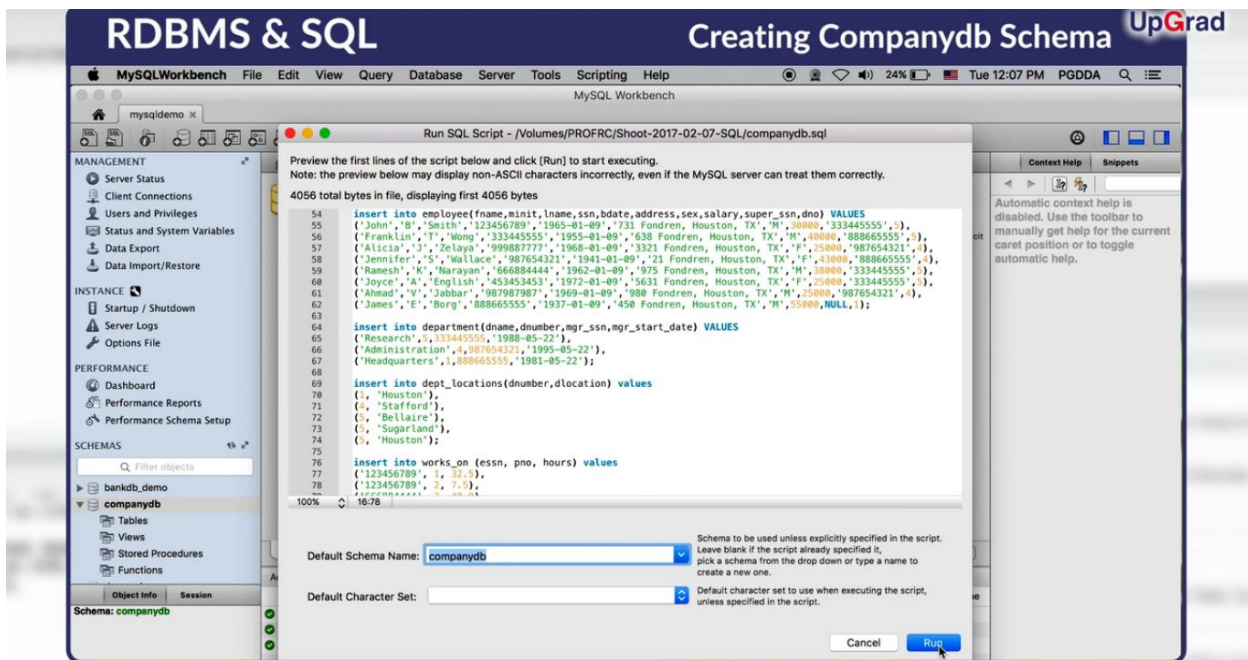

- You can see that the script contains all the SQL queries to create a database.

- From the **Default Schema Name** drop-down menu, select **companydb** and then click on the **Run** button.

- Click on the **Close** button. The schema is ready to use.
